

Data Validation (DV) Report
for TESS ID 169249234
Sectors 45 - 62
Cadence: TARGET (10.0-min)

This Data Validation Report was produced in the
TESS Science Processing Operations Center (SPOC) Pipeline
at NASA Ames Research Center

11-Jul-2023 22:59:47 Z

45	332	4:2	0.7773	0.7242
46	336	3:2	0.7578	0.6972
62	390	1:3	0.7308	0.7919

Planet Candidate	TOI ID	TESS Name	TOI Correlation	Period (days)	Period Ratio	Epoch (BTJD)	Semi-major Axis (AU)	Radius (Re)	Seff	Teq (K)	False Alarm	Suspected EB
1	2524.01	-	0.97	7.186	1.00	2527.432	0.07	12.8	256.1	1020	0.00e+00	false

2 Survey Image

Digitized Sky Survey (DSS) red image. The 5' x 5' image is centered on the J2000 coordinates of target (169249234).

3 Flux Time Series

Summary plot of sector-stitched flux time series and transits for target 169249234, marked with DV fitted epoch/period (or TPS epoch/period if fit was not successful). Transits of identified planets are labeled with epoch BTJD and orbital period. For the data of sector 45, target table 332, start BJD is 2459525 and the vertical offset is 0 ppm. For the data of sector 46, target table 336, start BJD is 2459551 and the vertical offset is 50000 ppm. For the data of sector 62, target table 390, start BJD is 2459988 and the vertical offset is 100000 ppm.

Open `./summary-plots/0000000169249234-00-flux-dv-fit-45-332.fig`

Summary plot of raw flux time series. For the data of sector 45, target table 332, start BJD is 2459525 and the vertical offset is 0 electrons/cadence. For the data of sector 46, target table 336, start BJD is 2459551 and the vertical offset is 230000 electrons/cadence. For the data of sector 62, target table 390, start BJD is 2459988 and the vertical offset is 460000 electrons/cadence.

Summary of model fitter results and validation test results for target 169249234, planet candidate 1. In general, green denotes that the candidate is likely a planet, while red denotes that the candidate is unlikely to be a planet. Cyan denotes that no data is available. The color of the Model Fitter block is: green, when the SNR of the fit is greater than or equal to 10; yellow, if the SNR is greater than or equal to 7.1 but less than 10; red, if the SNR is less than 7.1 or if the fitter failed. The color of the Ghost Diagnostic Test and Eclipsing Binary Discrimination Test blocks are: green, when the significance is within 2-sigma; yellow, when the significance is between 2- and 3-sigma; red when the significance is greater than 3-sigma. The color of the Difference Image Centroid Offsets block is: green, when the max offset distance sigma is less than or equal to 2; yellow, when the max sigma is between 2 and 3; red when the max sigma is greater than 3. The color of the Bootstrap Test block is green whenever the false alarm probability is less than 10^{-12} , low enough to limit the total number of false alarms from a four year mission to less than one. If the false alarm probability is greater than 10^{-12} , the color of the Bootstrap Test block is: green, when the false alarm probability is less than or equal to the CCDF of a Gaussian distribution at the observed maximum multiple event statistic; yellow when the false alarm probability is between 1 and 2 times that of a Gaussian distribution at the max multiple event statistic; and red when the false alarm probability is more than 2 times that of a Gaussian distribution at the max multiple event statistic.

5 Pixel Level Diagnostics

To reduce clutter, the catalog IDs in the difference images have been replaced by indices representing distance from the target star. The mapping between the indices and the catalog IDs is found in a table at the end of this section.

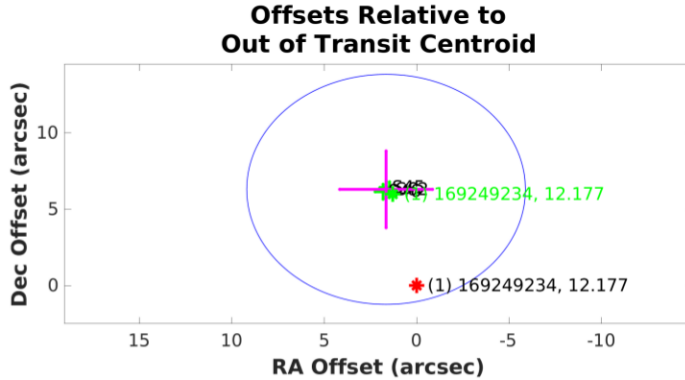

5.1 Planet Candidate 1

Multi-Sector Average PRF Fit of the Difference Images

Mean offset from the PRF fit to the out of transit image			
	RA	Dec	Units
Offset	$1.6546 \pm 2.51e + 00$	$6.3009 \pm 2.51e + 00$	arcseconds
Offset/ σ	0.66	2.51	
Offset Distance	$6.5146 \pm 2.51e + 00$		arcseconds
Offset Distance/ σ	2.59		
3σ Radius	7.5429		arcseconds

Mean offset from the TIC RA and Dec			
	RA	Dec	Units
Offset	$0.3587 \pm 2.53e + 00$	$0.3145 \pm 2.53e + 00$	arcseconds
Offset/ σ	0.14	0.12	
Offset Distance	$0.4770 \pm 2.53e + 00$		arcseconds
Offset Distance/ σ	0.19		
3σ Radius	7.5892		arcseconds

Planet Candidate 1

Difference image centroid offsets for target 169249234, planet candidate 1. Left: difference image PRF centroid offsets in RA and Dec with respect to the per sector out-of-transit centroids for the given target. Right: difference image PRF centroid offsets in RA and Dec with respect to the TC coordinates of the given target. Symbol key: green cross: per sector centroid offsets with 1-sigma error bars in RA and Dec; magenta cross: robust weighted mean offset over all sectors with 1-sigma error bars in RA and Dec; blue circle: 3-sigma radius of confusion for weighted mean offset; red asterisk: location of target star (out-of-transit centroid in left panel and TIC position in right panel); green asterisk: TIC location of target star with respect to out-of-transit centroid; blue asterisk: location of other TIC objects in the neighborhood. TIC ID and magnitude are noted in the text associated with each marked object. A constant error term of 2.5000 arcseconds has been added in quadrature to the computed uncertainty in the RA and Dec components of the robust mean offset.

RA, Dec and Distances are corrected for proper motion. This table may not contain all of the objects shown.

6 Phased Light Curves

Phased unwhitened flux time series is plotted in black dots. When all transits fit completed with full or secondary convergence, the phase is determined with the fitted epoch and period; otherwise, the phase is determined with the TPS epoch and period. The values of the phased unwhitened flux time series averaged in one cadence wide bins are plotted in bigger blue dots. When all transits fit completes with full or secondary convergence, the averaged values of the phased unwhitened fitted model light curve are plotted in red dots. Transit event markers in different colors indicate the locations of the transits of all planet candidates. The transits of the same planet candidate are labeled with the markers of the same color, for example, blue markers for transits of plane candidate #1, red markers for transits of planet candidate #2, etc.

Halo Aperture Statistic	1.1709e+01	100.00
Ratio of Core/Halo Aperture Statistics	2.8316e+00	

7.4.5 Validation Test Figures

The primary event has been set to zero and both the max and min of the resulting MES vs. Phase are marked with a red star. The best matched pulse duration in hours is 3.5. The maximum secondary MES and corresponding phase are 3.2966 and 5.2827 days respectively. The minimum secondary MES and corresponding phase are -2.6136 and 4.5417 days respectively.

Open `./planet-01/report-summary/0000000169249234-01-weak-secondary-diagnostic.fig`

Bootstrap results for target 169249234, planet 1. Cumulative sum of the probabilities (derived from the histogram of counts) from upper tail to the search transit threshold; false alarm probability is indicated by the star. The Gaussian equivalent threshold for this false alarm probability is Inf. The threshold on this distribution that achieves the same false alarm rate as a 7.1 sigma threshold on a Gaussian distribution is 7.4768.

Open `./planet-01/bootstrap-results/0000000169249234-01-bootstrap-false-alarm.fig`

Optical ghost diagnostic core aperture flux time series for target 169249234, planet candidate 1. The unwhitened time series is phase folded at the orbital period associated with the planet candidate and centered on the epoch of the first transit. The time series was first cotrended against spacecraft engineering data, motion proxies, and/or cotrending basis vectors (CBVs) to remove systematic effects. Flux time series data represent the mean per pixel flux in the core or haloaperture; phase folded data points are shown in the figure with black dots. Binned and averaged phase folded flux values are marked with filled blue circles. The unwhitened transit model light curve is displayed in the figure with a red line. The value and significance of the core aperture correlation statistic are displayed in the figure title if the statistic was successfully computed.
